2612

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-10 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-8 and 10 is/are rejected.
- 7) ☒ Claim(s) 9 is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 21 June 2000 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

## Priority under 35 U.S.C. §§ 119 and 120

- 13) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some \* c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

## Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s) 2.
- 4) ☐ Interview Summary (PTO-413) Paper No(s) \_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_

Art Unit: 2612

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 7 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Shintani et al (US 5,875,034).

With regard to claim 1, Shintani et al discloses in Figs. 1 to 3B, a still video camera with a built-in printer (col. 7, line 22+), which comprises the camera section (camera main body 1, col. 6, line 22), image sensor (CCD 101), memory (memory card 112, col. 7, line 66); printer section (printer section 111, col. 7, line 65), power source section (power source supply unit 109, col. 7, line 59), and first power source and second power source (power source 109 including main battery EB generates first power source such as voltage E2 and E3 used to power the CCD and camera section and second power source, high voltage E1 used to power the printer, col. 9, lines 1-50; where each of the power source has separate and different voltage such as 24 V or 15 V).

Art Unit: 2612

With regard to claim 7, Shintani et al (US 5,875,034) discloses in Figs. 1 to 3B, a still video camera with a built-in printer (col. 7, line 22+), which comprises the switching device (CPU 100 controls power supply 109 that switches different power sources to different sections of the camera system; in other words, the CPU 100 is considered as a switching device as claimed, col. 9, lines 7-50 and Table 1).

With regard to claim 8, Shintani et al (US 5,875,034) discloses in Figs. 1 to 3B, a still video camera with a built-in printer (col. 7, line 22+), which comprises the switching device controlled by depending upon input signals entered through external operation (Shintani et al discloses in col. 9 and col. 21, lines 58-67 and col. 22, that control signal Dcon from CPU 100 is used to activate the power sources; where the CPU is activated by the functions inputted by a user. In other words, the CPU is controlled by an external operation of a user).

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability

Art Unit: 2612

shall not be negatived by the manner in which the invention was made.

Claims 2-6 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shintani et al in view of Aoto et al (US 6,515,761) .

With regard to claim 2, Shintani et al discloses the same subject matter as discussed with respect to claim 1, except that the recoding material is a photographic material.

Shintani et al does not explicitly discloses any printer that uses a photographic material as printing papers. However, Aoto et al teaches using a camera system in which printer 200 uses print head 271 projecting light onto photosensitive paper 21 so as to print an object image thereon (col. 14, line 13-14, col. 17, lines 18-29, and col. 18, lines 1-2); where the use of the photosensitive material would simplify the printer circuit since there is no need for color ribbons or color inks.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to substitute the printer section of Shintani et al with printer 200 of Aoto et al; where the Aoto printer uses photosensitive paper or photographic paper in order to produce a hard copy for a pickup image captured by the camera section.

Art Unit: 2612

With regard to claim 3, Shintani et al in view of Aoto et al discloses the same subject matter as discussed with respect to claim 2, except for the printing head moving relative to the photographic material.

Shintani et al in view of Aoto et al discloses that printer 200 that including print head 271 projecting light onto the photosensitive paper 21; where the print head comprises LEDs formed in a straight line across the printing paper 21 (col. 17, line 24). However, Shintani et al in view of Aoto et al does not explicitly discloses any printing head moving relative to the photosensitive paper.

Official Notice is taken for a printer that includes a print head able to move relative to a printing paper so as to provide printing data to the paper.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the printer of Shintani et al in view of Aoto et al in order to obtain a print head that moves relative to the printing paper. This is because the modification of the print head relative to the paper simplify the printer circuits by reducing rollers used to transport the paper to the print head and thereby to reduce the size of the camera and to conveniently to carry.

Art Unit: 2612

With regard to claim 4, Shintani et al discloses the same subject matter as discussed with respect to claim 1, except for the second power source having a larger capacity than the first source.

Aoto et al teaches using two different power sources: power source 141 (col. 15, line 10) for camera section 100 and power source 237 for printer section 200 respectively (col. 16, line 54).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to implement the separate power sources as suggested by Aoto et al in the camera system of Shintani et al so as to obtain the separate power source for camera section 100 and printer section 200, each of the sources has separate a power capacity. Because the modification of the Shintani et al system would allow a user easily to replace a power source for each device and select a particular capacity for each source.

In the combination, since the printer consumes more power than the camera section, the battery is used in the printer inherently large than the one used in the camera section. Thus, the printer can use up the battery power in a reasonable time.

Art Unit: 2612

With regard to claim 5, Shintani et al in view of Aoto et al discloses the use of two different battery power sources; where the second power id a secondary batter.

With regard to claim 6, Shintani et al in view of Aoto et al does not explicitly disclose the batteries in the camera section and printer section, which are compatible.

Official Notice is taken for batteries use in a different section of a device, which are compatible so as to easily and conveniently to replace the batteries.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to replace the battery power sources of Shintani et al in view of Aoto et al so as to obtain batteries used in the power source compatible and thereby easily to replace the batteries.

With regard to claim 10, Shintani et al discloses the same subject matter as discussed with respect to claim 1, except that the second power source is accommodated in a housing that is attached to a camera body in a removable fashion.

Aoto et al discloses in Fig. 4 that printer section 200 can be attached to the camera body 100 where the battery power source of the printer is inherently removable so as to replace as needed.

Art Unit: 2612

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the camera system of Shintani et al in the same fashion as disclosed by Aoto et al so as to obtain the battery power source is accommodated in a housing attached to a camera body in a removable fashion and thereby to easily to remove batteries as needed.

3. Claim <sup>9</sup>~~10~~<sub>1</sub> is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Erlichman discloses an electronic camera that includes a printer.

McIntyre et al discloses an electronic camera that includes ink jet printer.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to TUAN HO whose telephone number is (703) 305-4943. The examiner can normally be reached on Mon-Fri from 7AM to 4PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, WENDY GARBER, can be

Art Unit: 2612

reached on (703) 305-4924. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-4700.
